R57040-NRFIT, Pudendal Needle Block – NRFit®

The Rocket Medical Pudendal Block Needle is used for transvaginal injection of local anaesthetic agents into the pudendal nerve area for the creation of a regional pudendal nerve block during the second stage of labour and in obstetric procedures.

The device may be used when a regional pudendal nerve block is required:

- During the second stage of labour,
- Prior to the repair of an episiotomy or perineal laceration, or
- Prior to an instrumental delivery.

The Pudendal Block Needle – NRFit, with Transport Clip Attached

Patient injury and death have previously been reported due to misadministration of regional anaesthesia and intravenous medication, for example, regional anaesthesia via the IV route and non-epidural medications into the epidural space.

Rocket Medical Pudendal Block Needle features an NRFit connection, which is designed specifically for neuraxial applications and regional anaesthesia. The use of NRFit devices helps to minimise the risk of adverse events due to misconnections and misadministration of medications to the wrong bodily system.

Benefits

- **Control depth of penetration** - the needle guide was designed with safety in mind, ensuring a maximum of 12mm tissue penetration
- **Prevent accidental needle deployment before use –** with the transport clip in place, accidental release of the needle tip from within the guide is prevented, protecting the healthcare professional before use and the packaging during transport
- **Individual control and comfort during use** – the finger support ring can be positioned in one of two positions depending on the preference of the user

ISO 80369-6

- The ISO 80369 standards for small bore connectors were developed to reduce the risk of misadministration of medication into the wrong bodily system.
- ISO 80369-6 is the standard for small bore connectors for neuraxial and regional anaesthesia.
- These connectors are also known by the name, “NRFit”.
- Devices typically feature the colour yellow, for easy recognition.
